## **EXHIBIT A**

- 6. A method for treating an IgE-mediated disease in a patient, the method comprising administering to a patient in need of such treatment a therapeutically effective amount of an anti-CD40 monoclonal antibody or an antigen binding fragment thereof, said monoclonal antibody or fragment thereof being free of significant agonistic activity and binding to a human CD40 antigen located on the surface of a human B cell, wherein the binding of the antibody to the CD40 antigen on the surface of said B cell prevents the growth or differentiation of the B cell.
- 8. The method of claim 6 wherein the monoclonal antibody is selected from the group consisting of 5D12, 3A8 and 3C6.

- 9. The method of claim 8 wherein the monoclonal antibody is 5D12.
- 10. The method of claim 8 wherein the monoclonal antibody is 3A8.
- 11. The method of claim 8 wherein the monoclonal antibody is 3C6.
- 29. The method of claim 6 wherein said antigen binding fragment of said monoclonal antibody is selected from the group consisting of Fab, F(ab)<sub>2</sub> and Fv.
- 30. The method of claim 6 wherein said monoclonal antibody or said antigen binding fragment thereof is humanized.
